

nestorgames

A racing board game for 2 to 8 players by
Néstor Romeral Andrés

INTRODUCTION

nestorgames GP is a fast and furious racing game for 2 to 8 players, derived from **TOP SPEED** by the same designer, that simplifies many aspects of its predecessor and also adds some fun twists such as special items or shortcuts. It is a tribute to the arcade racing games of the 80's, such as *SuperSprint* or *Nitro*.

MATERIAL

- Board with racing track
- One racing car, one cylinder, 3 discs and 6 dice for each of the 8 colors.
- One small tray
- 2 turbines (turbo boost).
- 2 rockets
- 2 bombs
- 2 wrenches
- 4 oil spills
- One large tube for storage

SETUP

Place the board (circuit) in the middle of the playing surface. Set the special items (gray) and the oil spills aside.

Each player chooses a color and takes all items and dice of that color (oil spills are black, but are not related to the black car).

Determine a starting player for the **qualifying round** by any peaceful means.

Each player, in counterclockwise order, does the following on her turn:

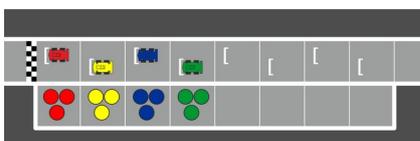

Roll one of your dice. Then you can opt to stop rolling dice or roll another one, and so on until you've either stopped rolling dice or you've rolled the same number twice. Notice that you can't roll more than 6 dice.

- If you have stopped rolling (you don't have any repeated result) add up all the values of your rolled dice. This is your qualifying value.

- If you've rolled the same number twice instead, your qualifying value is zero.

The player with the highest qualifying value goes first in the pit lane, with the rest of the players going in the same order as they are sitting and counterclockwise. Ties are resolved by additional rounds.

Place the cars accordingly in the pit lane. Place the 3 discs of each player on the **'box'** adjacent to the square that their cars are. Those are the lap counters.

Setup example for 4 players. Red won the qualifying round.

HOW TO RACE (BASIC RULES)

The player that qualified best starts.

On your turn, if your car is belly up (you crashed on your previous turn) flip it over and **pass the turn**. Your car doesn't move.

Otherwise, roll your dice the same way as in the qualifying round. One of these three things can happen:

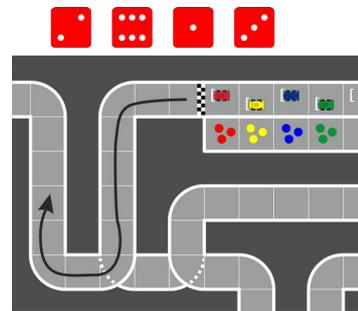

- You've rolled the same number twice but your car is **not** on a corner. Your car does not move.

Example: Yellow has rolled a second 5. Yellow doesn't move.

- You've rolled the same number twice **and** your car is on a corner. You've **crashed!** Apply the **Crashing** rule (see below). Your car does not move.

- You've stopped rolling so you don't have repeated results: Add up all the values of the rolled dice and move your car forward **exactly** that many spaces along the track. Other cars don't block your movement.

Example: Red moves 12 spaces (2+6+1+3)

If your car **moves** and ends its movement on a space occupied by **another car**, you bump into it:

- If the space **is a corner**, you've crashed into all cars on that corner. Apply **Crashing** to all those cars.

- If the space **is not a corner**, move the car you bumped into one space forward. If, as a result, that car bumps into another car repeat the process. If any bumped car moves into a corner, it crashes (apply **Crashing** to it). If there was another car (or more) on that corner then all of them crash on that corner.

In general, cars on corners can't move forward as a result of a bump. They crash instead. As a result, there can be several cars on a corner, but not on square spaces.

CRASHING

When a car crashes, flip it over belly-up, take one of its dice and place it on its 'box' by the side of the pit lane. You won't be able to use the dice that are in your 'box' unless you **Fix the car** (see below).

In general, cars only crash on corners. And every time a car crashes it gets flipped over belly-up and loses a die.

CROSSING THE FINISH LINE

If as a result of the movement, your car has **crossed the finish line** (after completing a lap; the first time does not count as it is the start of the race), then take one of your discs from your 'box'. If you've taken your 3rd disc you have ended the race (can agree on longer races). If you've been the first player taking all your 3 discs **you've won the race!** The rest of the players can continue racing until they finish.

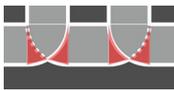

THE SHORTCUT

Once per race, your car can take the shortcut instead of making a full lap. This lap counts as a full lap for lap counting purposes.

If you take the shortcut, place your **cylinder** in your 'box'. This is to indicate that you can't use the shortcut anymore.

Note: The small 'triangles' along the shortcut are not considered 'spaces'.

THE LOOP (NEW)

The loop square must be crossed in a straight line (without turning). If you stop on this square, leave the car pointing in the correct direction so you know where to move on your next turn. When bumping into a car on this cell, bumping rules are applied as usual, but this means a car can be bumped away from its legal path. In this case, the bumped car must continue racing in the new direction on its next turn (indicated by the arrows). Notice that a bump might result on the bumped car losing or gaining advantage.

FIXING YOUR CAR

Instead of taking any action on your turn, you can recover **one** die from you 'box', if any. Your car **doesn't move** this turn.

THE SPECIAL ITEMS

All players must agree on using the advanced rules before playing the game.

Before the race starts, place the 'tray' token on the square right in front of the leading car. The leading player then picks any special item and places it inside the tray.

If, during the race, your car ends its movement in the square occupied by the tray do the following:

1. Take the item that is inside.
2. If there are available items left (those not in possession of the players or placed on the track), place the tray in the square right in front of the leading car and put any available item inside. If there is an item or a car already there, place the picked item on the next available space. If there are no items available, place the tray anywhere outside the track.

The tray doesn't block the movement of the cars.

HOW TO USE THE ITEMS

You can use **one** of your items **before** playing your normal turn. Once **used**, set them aside so they **become available again** (with the exception of the oil spill)

- **Rocket**: Count the number of spaces in a straight line too the car right in front of yours (if there is a corner in-between you can't fire the rocket). Roll one die. If the result is *equal to or higher than* the distance to your target car, you hit it with the rocket and all the cars in that space **crash** with all the consequences (belly-up, die lost).

Notice that you can make many cars crash at once if they're all in the same corner.

- **Bomb**: Place the bomb in the space occupied by your car. If any car ends its movement in that space the bomb explodes and that car crashes (belly-up, die lost).

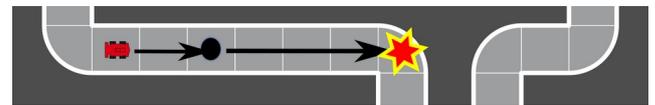

- **Wrench**: Recover **all** lost dice at once, flip your car over if it was belly up, and then play the normal turn.

- **Turbo boost**: Play the turn as usual, but when **moving**, count your highest die twice. Notice that if you can't move (you've rolled the same value twice) you lose the turbo boost.

Example: Red uses the 6 twice, for a total of 18 movement points.

- **Oil spill**: Place the oil spill on the space occupied by your car. If any car **ends its movement** in that space the car slides in a straight line until it reaches a corner and crashes (belly-up, die lost), together with all cars on that space if any. Oil spills **remain** on the board for the duration of the race.

The Red car ends its movement on a spill, slides and crashes.

CHAMPIONSHIP RULES

A championship consists of several races. Determine the winning score for the championship (Recommended score is 3 times the number of cars).

Being 'n' the number of cars in the race, the winner of a race scores 'n' points, the second scores 'n-1' points and so on.

After each race, players add their scores to their accumulated score for the championship. If at least one player reaches or surpasses the winning score for the championship, the player with the highest accumulated score becomes the world champion. Ties are broken by the number of wins. If ties persist play a tie-breaker race.

TEAMS

This variant can be played with an even number of players. Every 2 players form one team. Teams must be arranged before the qualifying round. Racing order is irrelevant (just qualify as usual).

WINNING

Add up the race scores for all cars of each team to determine the winning team. Ties are broken by the highest ranked car.

NOTES FROM THE DESIGNER

Prior to GP, I considered TOP SPEED to be my best multiplayer game. It was bashed and trolled on Boardgamegeek because it uses a mechanism used in another game (Incan Gold). As using existing mechanisms is something usual in game design and I enjoy this one so much, I've decided to use it **again** in GP. However, I'm using dice instead of cards to simplify the manufacturing and game play.

Notice that the maximum movement points seem to be 21, but there is a way to move up to 28 spaces on your turn. And even 38! Can you see how?

The board is so big because it's possible for several cars to collide on the same corner, so the track spaces are much larger than the cars. Also I've opted for a minimalist design because I like it.

There is enough room inside the tube for potential expansions...

VARIANT

Some players prefer to start the game with all the special items already on the board. In order for this variant to work, some rule changes must be applied and agreed upon before the game starts:

1. The small tray is discarded to the game tube.
2. Before the race starts, the last player in the pit lane places all the oil spills on empty spaces of the race track. This means that they **can't be 'picked up'** and used by the players. They remain where they are for the duration of the race.
3. Then, this same player places each special item on an empty space of the race track. The 'bombs' must be placed facing down¹. This means they are 'inactive' and can be picked up by a player.
4. During the race, and **after an item is used**, place it in front of the leading car. If there is an item or a car already there, place the picked item on the next available space. The item is then available to be picked up again. Available bombs are placed facing down (inactive).
5. Active bombs are placed facing up (so they explode when stepped over).

Example: A car ends its movement on top of an active bomb (the bomb is facing up). The bomb explodes and the car crashes. Take the bomb and place it facing down (inactive) in front of the leading car so it can be picked up and used again.

Notes: this variant lacks the option of placing oil spills during the race and also it's a bit advantageous for the leading cars (although the player that places the items at the start can counteract this with a clever placement). However, it makes the race a bit more aggressive and chaotic.

¹ Because we're not using the small tray to indicate that the bomb is inactive and available.
